

WHEN SAFETY IS A PRIORITY

Shat-R-Shield

Plastic-Coated, Shatter-Resistant Lamps

The Safest, Most Cost-Efficient Protective Lighting Available

Shat-R-Shield Advantages

- *If the lamp is broken, virtually all glass, mercury and phosphors are safely contained.*
- *Skin-tight plastic coating - not a sleeve - which can allow dust, oil and heat build-up, which causes lower lumen output and premature lamp burnout.*
- *Shat-R-Shield uses only Philips, Osram Sylvania & GE lamps and coats with DuPont plastics.*
- *Standard fluorescent coating has UV stabilizers to block over 95% of ultraviolet emission.*
- *Coatings will not yellow, crack or flake.*
- *Light output loss is less than 1%.*
- *Even an 8' lamp can be easily and safely installed by just one person.*
- *Safe installation and disposal - you never touch bare, unprotected glass.*
- *Fluorescents available in all sizes, colors and Kelvin temperatures.*
- *Protective lighting is required in many industries.*
